SERVING

GSM • PSTN •
ENTERPRISE

A decade of keeping Pakistan's telecom hardware online

Al Noor Engineers (Pvt.) Ltd. is a Pakistan-based B2B firm with more than ten years in telecom equipment repair, maintenance and supply — new and refurbished. Our clients are GSM and PSTN operators, telecom vendors and enterprise infrastructure teams. We repair to operator standard, document the work, and stand behind every unit that leaves the lab.

The company operates a designated repair lab equipped for bench and field work: fault isolation, component-level rework, load testing and the documentation that goes out with every repaired unit. On the supply side we stock and source test instruments, fiber tools and telecom hardware with proper part traceability — delivered to site anywhere in Pakistan.

10+

years serving telecom operators

33

THE STANDARD

Do the repair properly. Load-test it. Write it down. Stand behind it. Every unit that leaves the lab carries that standard — and the record to prove it.

Finance, run with banking discipline

Muhammad Azam Yaqoob is a banking professional with over a decade of experience in branch operations, relationship management and corporate banking. He has served at Soneri Bank as Officiating Branch Manager, at JS Bank as Relationship Manager and Floor Manager, and at Bank Islami as Business Executive.

As Chief Financial Officer he directs the company's financial operations, banking relationships and fiscal controls — bringing the audit-ready, compliance-first discipline of formal banking to the way Al Noor Engineers runs its books.

THE CFO MANDATE AT AL NOOR ENGINEERS

Cash flow & working capital — keeping the repair bench and the warehouse funded without disturbing operations.

Banking & trade relationships — facilities, guarantees and settlements that keep supply lines moving.

Budgetary control & reporting — project-cost discipline and clean books that partners and auditors can rely on.

Where we are headed

OUR MISSION

We serve and manage network operations within operator budgets, match OEM quality of service, and hold a standing commitment to repair and supply excellence across every segment we touch.

OUR VISION

To be the leading telecom services provider in Pakistan — recognized for technical depth, reliability and an ethically run operation that operators can depend on.

-
- 01** **Serve and manage network operations within the operator's budget** — no surprise spend, no padded scope.
 - 02** **Match OEM quality of service** on every repair and maintenance engagement, at a fraction of OEM turnaround.
 - 03** **Sustain a standing commitment to repair and supply excellence** across all equipment segments we cover.
-

REPAIR

Bench and field repair to operator standard — diagnosed, repaired, load-tested and documented before it goes back on the truck.

STEP 01

Diagnose

Fault isolation on the bench or in the field — make, model and failure mode documented.

STEP 02

Repair

Component-level rework to operator standard, with OEM-spec parts where required.

STEP 03

Load-test

Every unit runs under load before it ships — no exceptions.

STEP 04

Document

Test records travel with the unit. If it isn't written down, it didn't happen.
